

Resdesign Document

Yourdemy is an online platform designed to deliver personalized MOOC (Massive Open Online Course) content. Featuring a user-friendly interface, it offers a Home Page showcasing various course offerings. To access the full suite of features, users are prompted to register or log in. Once logged in, they gain access to a personalized dashboard displaying course offerings, progress, and rewards.

After reviewing the feedback received, several valuable points were highlighted. Firstly, it was suggested that the feedback form should incorporate open-ended questions to better capture users' general thoughts and ideas. Additionally, there was a recommendation for clearer distinctions between the interactive mode being on or off. Another suggestion was to integrate inquiries about users' preferred courses during the signup process. Furthermore, there was ambiguity noted regarding the usage of the interactive mode slider. On a positive note, the overall aesthetics and user experience of the designs were well-received by evaluators, indicating a likelihood of future use for learning purposes.

In response to this feedback, several changes were implemented. Firstly, an open-ended question was added to the feedback form to facilitate more comprehensive feedback collection. Secondly, separate wireframes were created to delineate between the interactive mode being on or off, with additional options for video chunks within interactive mode courses. Lastly, during the signup process, users are now prompted to specify their preferences for video chunk durations and review processes, enhancing personalization and user experience. We also added interactive mode slider to signup page as well.
